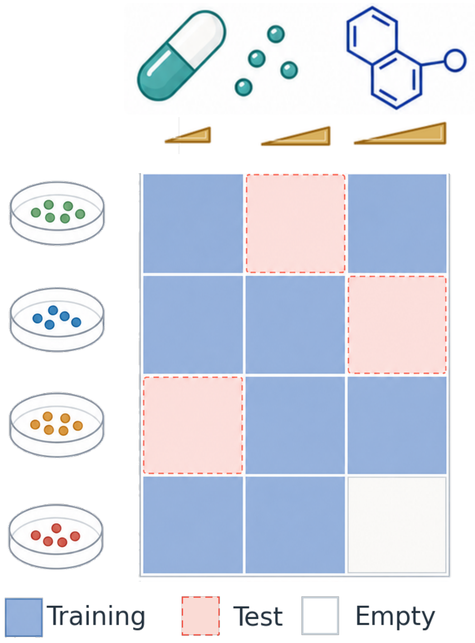
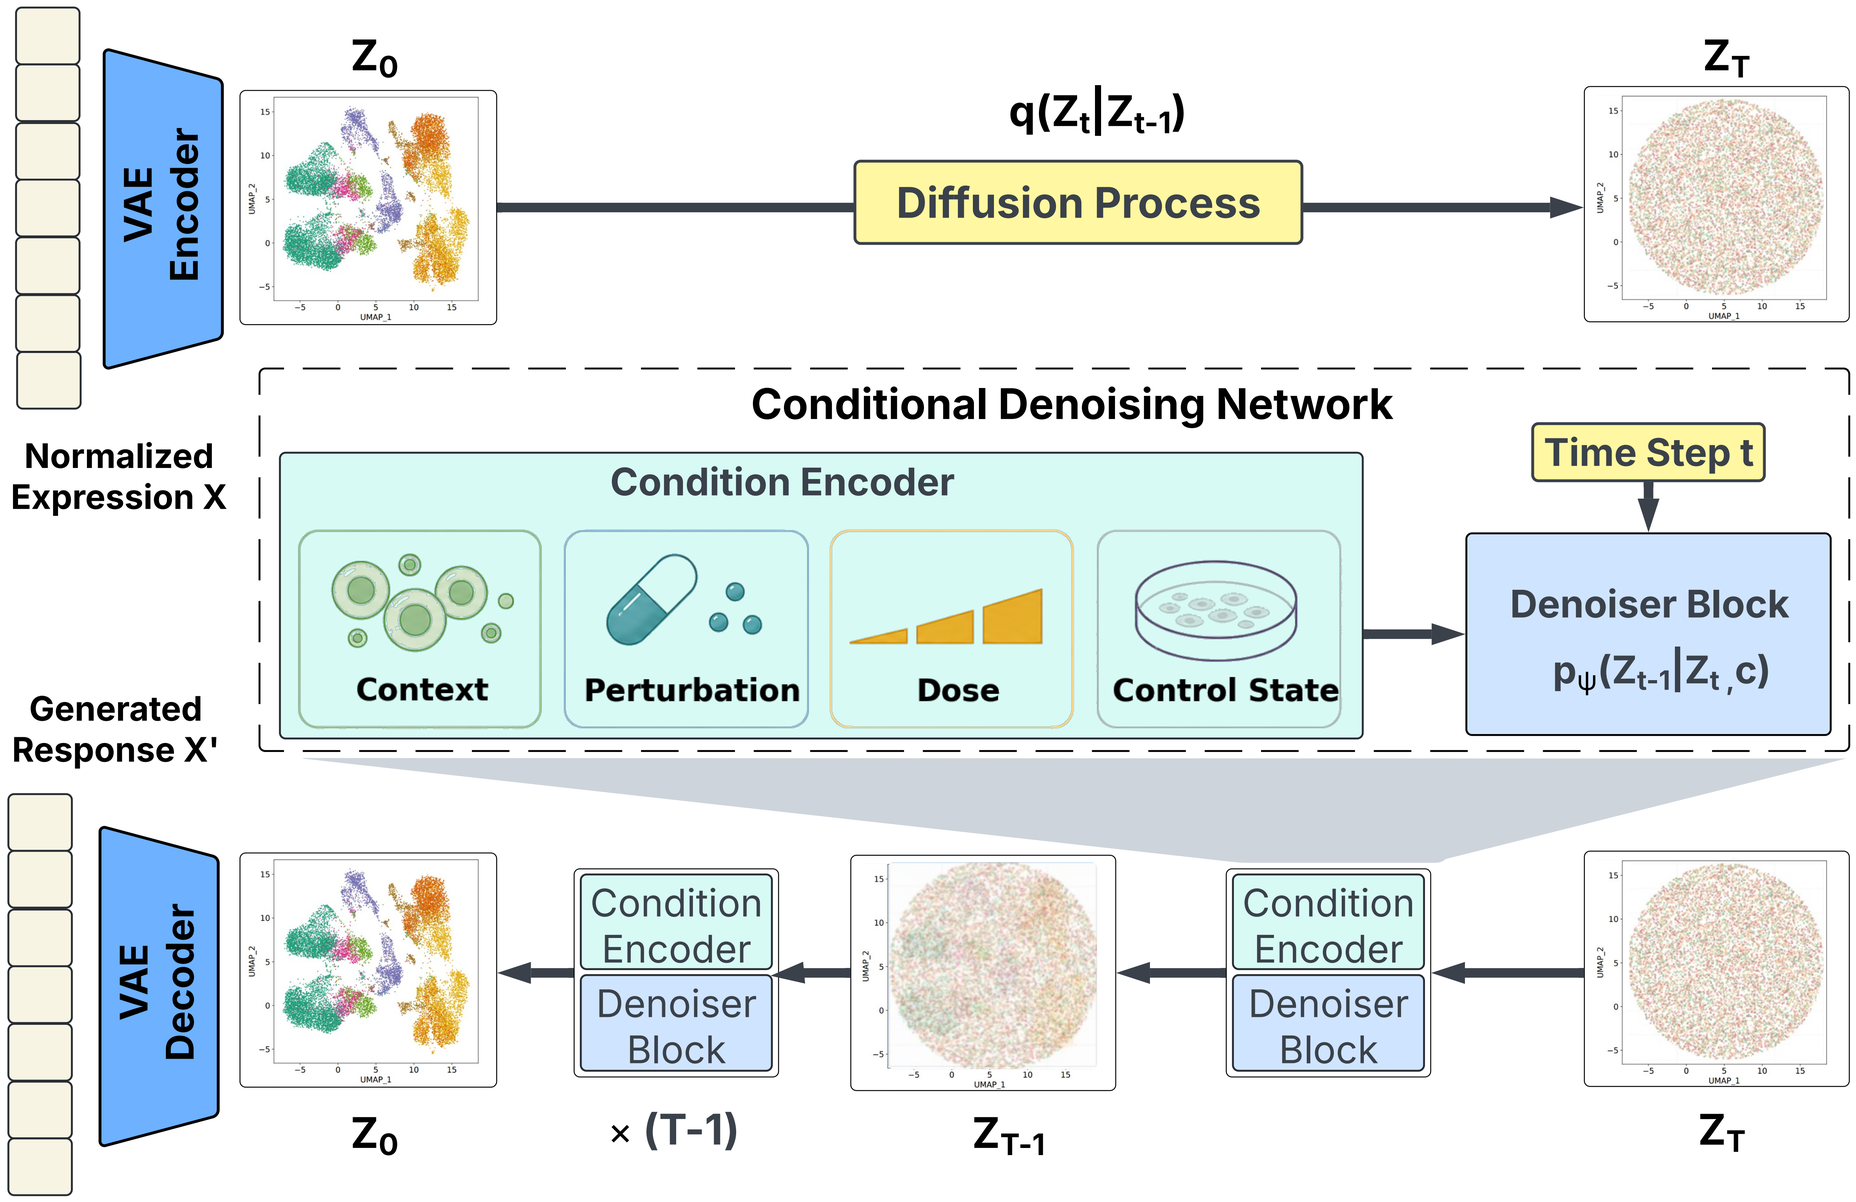
a

Tahoe-100M Dataset Harmonization



PerturbLDM

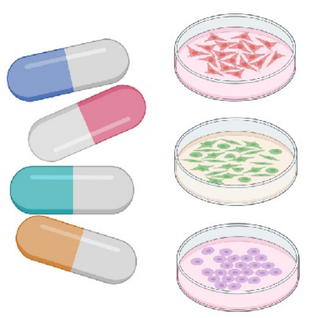


b

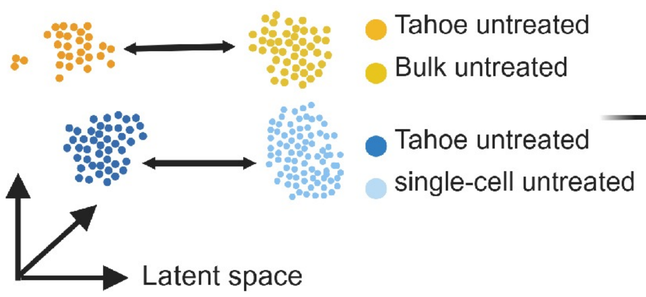
Drug-response profiles from an external assay platform

Shared anchor conditions for assay alignment

Tahoe-derived response generation in an external assay context

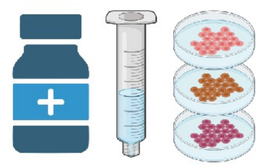


Bulk/ single-cell datasets



Calibrate assay alignment

Generate response profiles with the Tahoe-pretrained model

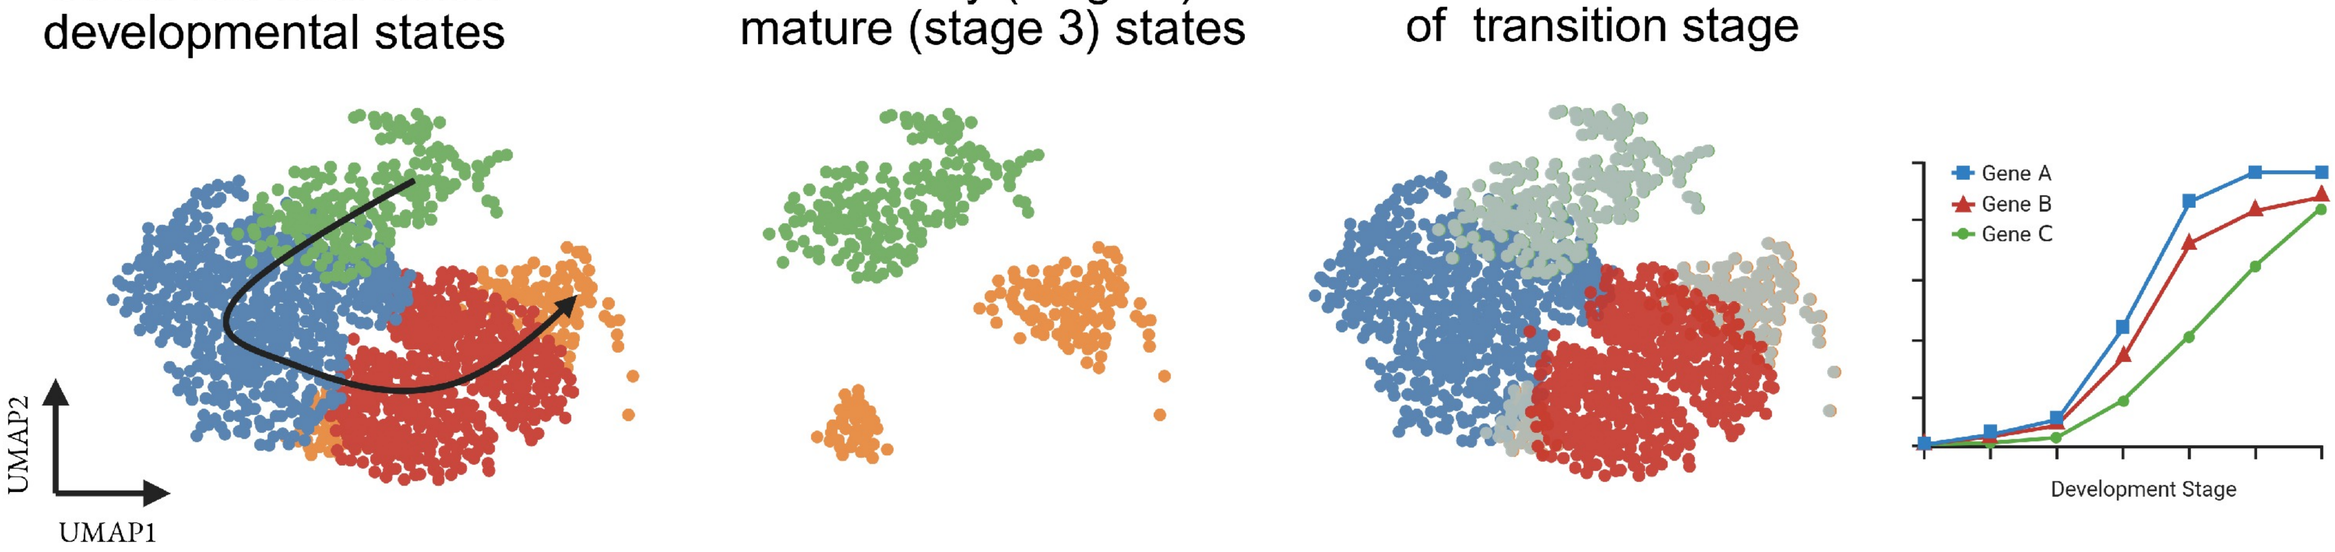


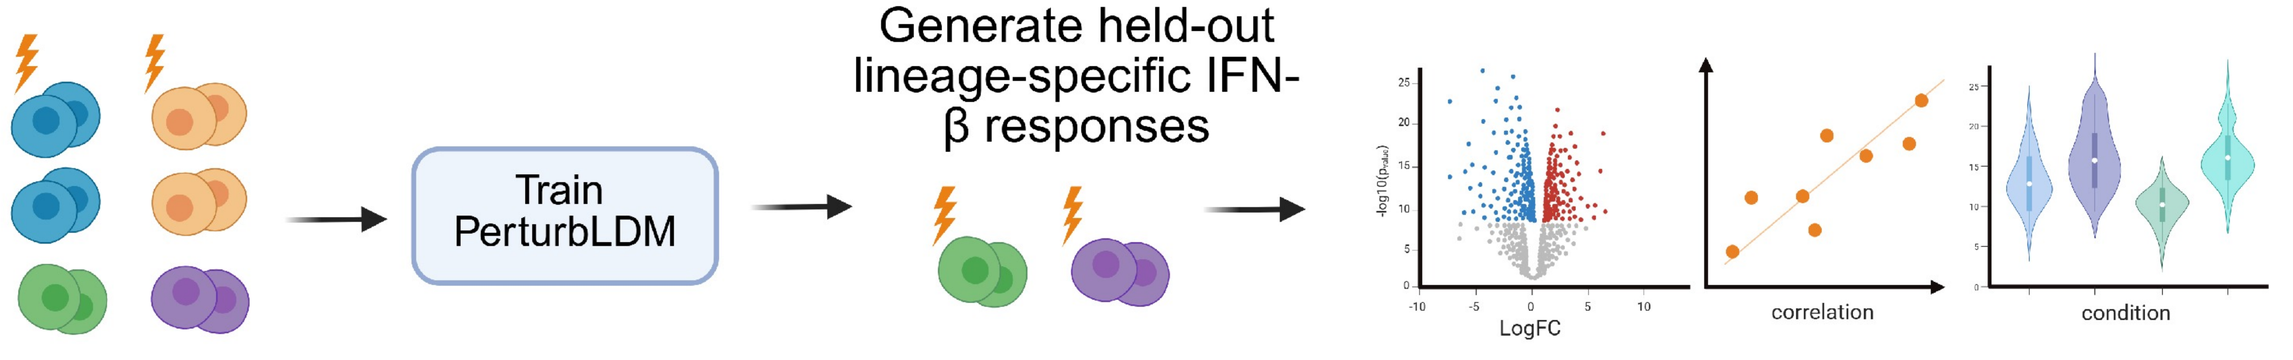
c

Observed fetal-colon developmental states

Train on early (stage 1) and mature (stage 3) states

Conditional inference of transition stage





d
